

HES-MDM Integration Guide

Document ID: SM-INT-005

Document Type: Integration

Department: IT/NOMC

Version: 1.0

Knowledge Base: Smart Meter AI Assistant — Synthetic Business Document

System flow

A typical data flow is Meter to Communication Network to HES to Integration Interface to MDM.

Interface data

Interfaces may use scheduled batches, APIs, message queues, or other approved integration mechanisms.

Scheduling

Successful processing should be confirmed using acknowledgements, record counts, timestamps, status codes, or reconciliation controls.

Acknowledgement

Failures should be classified into communication, interface, schema/data-quality, authentication, or downstream processing problems.

Failure handling

Operational teams should distinguish source failures from integration failures.

Reconciliation

Reconciliation compares expected and received records and identifies missing, duplicate, delayed, or rejected data.

Operational note

This is synthetic content created for local RAG development, testing, interview demonstration, and GitHub publication. It is not a confidential utility procedure or contractual document.
