

Remote Connect Procedure

Document ID: SM-RC-006

Document Type: Procedure

Department: NOMC

Version: 1.0

Knowledge Base: Smart Meter AI Assistant — Synthetic Business Document

Purpose

Remote Connect is a controlled operation used to remotely enable supply when supported and authorized.

Pre-checks

Verify meter identity, authorization, command eligibility, communication status, and applicable business conditions before sending the command.

Command

Submit the RC command through the approved HES workflow and record request time, status, response time, and final result.

Monitoring

Monitor the command until a valid acknowledgement or final failure status is available. Avoid uncontrolled repeated commands.

Failure handling

If RC fails, check communication, meter power, command eligibility, recent events, HES errors, and network conditions.

SLA

RC SLA reports should use approved request and completion timestamps and distinguish success, failure, timeout, and pending states.

Operational note

This is synthetic content created for local RAG development, testing, interview demonstration, and GitHub publication. It is not a confidential utility procedure or contractual document.
