

RC/DC SLA Guidelines

Document ID: SM-SLA-008

Document Type: Policy

Department: NOMC

Version: 1.0

Knowledge Base: Smart Meter AI Assistant — Synthetic Business Document

SLA definition

SLA reporting measures remote command performance against the applicable approved service target.

Measurement

Measurement should use the approved request and completion timestamps. The current contractual or operational SLA must be used rather than an assumed target.

Classification

Reports should classify successful, failed, timed-out, pending, SLA-compliant, and SLA-breached commands.

Exceptions

Approved exceptions such as power outage, unavailable communication, planned maintenance, or system outage should follow governing rules.

Reporting

Reports should show totals, successful commands, compliant commands, breaches, unavailable data, and exception categories.

Improvement

Improvement should focus on recurring communication problems, slow processing, field issues, system bottlenecks, and data gaps.

Operational note

This is synthetic content created for local RAG development, testing, interview demonstration, and GitHub publication. It is not a confidential utility procedure or contractual document.
