

Meter Communication Troubleshooting

Document ID: SM-COM-009

Document Type: Troubleshooting

Department: NOMC

Version: 1.0

Knowledge Base: Smart Meter AI Assistant — Synthetic Business Document

Symptoms

Symptoms include no recent response, repeated command timeout, missing interval data, delayed reads, and intermittent connectivity.

First-level checks

First checks include meter power, last communication time, signal information, SIM status, APN configuration, and HES errors.

Network

Network checks include coverage, registration, packet connectivity, APN correctness, SIM provisioning, and repeated disconnect patterns.

Meter

Meter checks include communication-module status, power, configuration, clock, and relevant event logs.

HES

HES checks include device registration, endpoint configuration, command queue, retries, and error codes.

Escalation

Escalations should include meter ID, last successful communication, observed error, command history, network evidence, and troubleshooting performed.

Operational note

This is synthetic content created for local RAG development, testing, interview demonstration, and GitHub publication. It is not a confidential utility procedure or contractual document.
