

SIM and APN Configuration Procedure

Document ID: SM-SIM-011

Document Type: Procedure

Department: Communication Operations

Version: 1.0

Knowledge Base: Smart Meter AI Assistant — Synthetic Business Document

SIM verification

Verify that the SIM is provisioned for the approved service and correctly mapped to the meter.

APN

Apply the approved APN, authentication, and related communication parameters.

Activation

After configuration, verify network registration and data-session establishment.

Testing

Test communication through the normal HES path and confirm a valid response.

Errors

Common problems include inactive SIMs, incorrect APN, authentication settings, SIM-to-meter mapping errors, and network restrictions.

Escalation

Escalate operator issues with SIM identifier, meter identifier, location, status, and test results.

Operational note

This is synthetic content created for local RAG development, testing, interview demonstration, and GitHub publication. It is not a confidential utility procedure or contractual document.
