

Load Profile Management

Document ID: SM-LP-013

Document Type: Operations

Department: Meter Data Management

Version: 1.0

Knowledge Base: Smart Meter AI Assistant — Synthetic Business Document

Load profile

A load profile is a sequence of energy or related measurements recorded at defined intervals.

Interval data

Operations include scheduled collection, completeness monitoring, gap identification, recovery, and validation.

Collection

Completeness is assessed against the expected number of intervals for the meter, date, and configuration.

Completeness

A gap can result from communication outage, HES collection failure, interface delay, meter configuration, or downstream processing.

Gap analysis

Reports should show meter ID, date range, expected intervals, received intervals, missing intervals, and suspected cause.

Reporting

Persistent gaps should be correlated with communication and HES/MDM status before field escalation.

Operational note

This is synthetic content created for local RAG development, testing, interview demonstration, and GitHub publication. It is not a confidential utility procedure or contractual document.
