

Billing Data Processing Guide

Document ID: SM-BILL-014

Document Type: Business Process

Department: Billing Operations

Version: 1.0

Knowledge Base: Smart Meter AI Assistant — Synthetic Business Document

Billing data

Billing uses approved meter readings and business rules to calculate customer charges.

Read sources

Before billing use, readings should be checked for completeness, timestamp correctness, duplication, abnormal values, and quality status.

Validation

Exceptions can arise from missing reads, invalid registers, communication gaps, meter replacement, configuration changes, or interface failures.

Exceptions

Approved estimation or adjustment processes must follow documented rules and retain an audit trail.

Processing

Processed billing data should be traceable to source readings and processing status where required.

Audit

Operations should coordinate with billing teams when data-quality issues may affect customer billing.

Operational note

This is synthetic content created for local RAG development, testing, interview demonstration, and GitHub publication. It is not a confidential utility procedure or contractual document.
