

Meter Data Validation Rules

Document ID: SM-VAL-015

Document Type: Technical

Department: Meter Data Management

Version: 1.0

Knowledge Base: Smart Meter AI Assistant — Synthetic Business Document

Validation

Validation identifies readings that may be incomplete, inconsistent, duplicated, or outside expected conditions.

Range checks

Range checks compare values with configured or engineering limits appropriate to the meter type.

Sequence checks

Sequence checks examine continuity and expected progression of cumulative and interval readings.

Duplicates

Duplicate checks identify repeated records caused by retries or interface problems.

Timestamps

Timestamp checks identify missing, future-dated, out-of-order, or inconsistent timestamps.

Quality flags

Quality flags should distinguish actual, estimated, missing, corrected, or otherwise processed data.

Operational note

This is synthetic content created for local RAG development, testing, interview demonstration, and GitHub publication. It is not a confidential utility procedure or contractual document.
