

Field Troubleshooting Manual

Document ID: SM-FIELD-019

Document Type: Troubleshooting

Department: Field Operations

Version: 1.0

Knowledge Base: Smart Meter AI Assistant — Synthetic Business Document

Safety

Begin with safety, work-order verification, correct meter identification, and approved utility procedures.

Communication issues

For communication problems, verify meter power, recent HES communication, module status, SIM/APN information, and network conditions.

Electrical issues

For electrical issues, check approved voltage/current indicators, phase condition, terminal connections, and meter events using authorized procedures.

Replacement indicators

Consider meter replacement only after troubleshooting establishes an approved replacement condition.

Evidence

Evidence can include meter ID, permitted photographs, event information, last successful communication, diagnostics, symptoms, and actions.

Escalation

Escalate unresolved issues with a concise problem statement, evidence, troubleshooting history, and recommended next action.

Operational note

This is synthetic content created for local RAG development, testing, interview demonstration, and GitHub publication. It is not a confidential utility procedure or contractual document.
