

Smart Meter Operations and Escalation Manual

Document ID: SM-OPS-020

Document Type: Operations

Department: NOMC

Version: 1.0

Knowledge Base: Smart Meter AI Assistant — Synthetic Business Document

Monitoring

Monitor communication health, RC/DC performance, load-profile completeness, data quality, interfaces, and recurring field issues.

Severity

Severity should consider customer impact, affected meters, duration, business impact, security implications, and critical-system availability.

Escalation

Route issues to HES, MDM, network, field, vendor, or application support based on evidence and ownership.

Incident information

An escalation should contain identifiers, time period, symptoms, timestamps, errors, permitted evidence, and troubleshooting already completed.

SLA reporting

SLA reports should separate genuine breaches from approved exceptions and unavailable source data and should state the measurement period and method.

Root cause

Root cause analysis should identify cause, contributing factors, corrective action, preventive action, and owner.

Closure

Close incidents after service restoration or approved disposition and after assessing relevant data or SLA impact.

Operational note

This is synthetic content created for local RAG development, testing, interview demonstration, and GitHub publication. It is not a confidential utility procedure or contractual document.
